Hyaluronic acid

THE SOURCE OF YOUNG SKIN

Hyaluronic acid

THE SOURCE OF YOUNG SKIN

Nutritional supplementation by Hyaluronic Acid is a perfect continuation of the Collabeauty Q10 Expert treatment - hyaluronic acid stimulates the production of collagen, starting out full cellular renewal.

Certainly in unison they work together, taking care of hydration, smoothness, elasticity, firmness, soothing and youthful appearance of the skin.

Hyaluronic acid WHERE IT OCCURS

Hyaluronic acid
THE SOURCE OF YOUNG SKIN

- in the subcutaneous tissue 4 one molecule of HA can bind up to 250 molecules of water, so in its natural form it becomes a filler; acting like a sponge - when the tension of the cell membrane decreases, it brings more water and replenishes the deficiencies
- in the intercellular matrix, where the so-called "youth proteins" are found - collagen and elastin fibers 4 stimulates cell proliferation, blood vessel formation and tissue regeneration
- in joint lubricant 4 protects against mechanical trauma and helps distribute nutrients to cartilage
- in the vitreous body of the eye 4 is used in contact lens solutions; it provides long-lasting lubrication, prolonging wearing comfort
- in the walls of blood vessels 4 has a building function and co-forms blood vessels

Hyaluronic acid
THE SOURCE OF YOUNG SKIN

NICE TO KNOW

Hyaluronic acid is a compound of homogeneous structure, naturally occurring in the human body - that's why it is hypoallergenic!

Hyaluronic acid
THE SOURCE OF YOUNG SKIN

Hyaluronic acid

HOW IT WORKS:

- moisturizes, soothes, refreshes
- smoothens, reduces fine lines and dark circles under the eyes
- protects, reduces the tendency to irritation
- improves tone and elasticity
- gives the skin a rested look, restores its radiance
- improves the overall condition of the skin.

WHEN CAN YOU USE IT?

- prophylactically at any age or in case of wrinkles, dark circles under the eyes
- for the care of dry, over-dried and dehydrated skin, as well as sallow, tired, pale skin
- in case of exposure to the sun and other unfavorable external factors that can damage the hydrolipidic barrier of the skin
- during menopause - because then there is a sudden decrease in moisture in the skin
- when working in closed rooms, in front of a computer

Hyaluronic acid
THE SOURCE OF YOUNG SKIN

NICE TO KNOW

From about 25 years of age, the amount of hyaluronic acid in the body gradually decreases, causing the skin to become more flabby, wrinkled, dry and sensitive. Around the age of 80, it disappears almost completely...
